ICZ AMIS*HD

NURSING DOCUMENTATION

COMPREHENSIVE PAPERLESS MOBILE SOLUTION

A REVOLUTIONARY SOLUTION BUILT IN COMPLIANCE WITH THE MODERN IDEA OF A PAPERLESS HOSPITAL AND DEVELOPED IN CLOSE COOPERATION WITH LEADING HEALTHCARE FACILITIES IN THE CZECH REPUBLIC. INTUITIVE, ERGONOMIC AND EASY TO USE. A FULLY MOBILE VERSION FOR TABLETS AND SMARTPHONES IS INCLUDED IN THE SOLUTION.

[FULLY PAPERLESS SOLUTION]

ICZ AMIS*HD® Nursing Documentation manages the complete field of nursing documentation in electronic form as much as possible and feasible. It is a highly efficient instrument increasing patient safety, especially thanks to a range of automatic control mechanisms eliminating the risk of human error.

ICZ AMIS*HD® Nursing Documentation supports:

- Nursing case history and its evaluation
- Diet records management
- Nursing plan with optional intelligent automatic generation according to case history data
- Nursing targets
- Scoring schemes (e.g. Norton and Torrance scales, Minimental test, Psychological test, etc.)
- Records on interventions and emergency situations
- CAVE, an overview of order forms and results
- Multimedia (e.g. pressure-sore documentation)
- Nursing Plan, Nurse Transfer Report and Client Information Form printing

ICZ AMIS*HD® Nursing Documentation is always supplied as a classic version designed for common terminals (workstations) and simultaneously as a mobile version designed for tablets and smartphones. The solution is built on the idea of the maximum automation of routine processes, and therefore demonstrably decreases the time load of medical personnel. It contains all the mandatory parts of nursing documentation and also many scoring schemes and intelligent forms.

The solution is ready for the most demanding and stressful operation in healthcare facilities. It is therefore intuitive, clear and fast to use.

ICZ AMIS*HD

FEATURES AND BENEFITS

- Comprehensive support for nursing documentation management
- Personnel time savings from process automation
- A practically focused solution developed directly in university hospital workplaces
- Intelligent workflow
- Option to implement proprietary code lists
- Many optional scoring schemes
- Fully automatic generation of nursing plans
- Support for a wide range of patient security mechanisms preventing human error

[MOBILE VERSION]

The option to operate the solution on mobile devices, such as tablets and smartphones, is a crucial innovation. Thanks to this unique feature, staff can use ICZ AMIS*HD® Nursing Documentation right by the patient's bed. Any need for paper in the nursing documentation management process is eliminated. The mobile version provides an exceptionally ergonomic environment focused on quick and streamlined task fulfilment. It also provides quick access to important patient information, and therefore becomes an indispensable assistant during everyday patient care. The fully touch-controlled application is specially optimized for use with mobile peripheral devices. ICZ AMIS*HD® Nursing Documentation is a fully multiplatform solution.
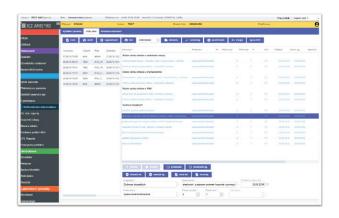

[FLEXIBILITY FOR DIFFERENT ENVIRONMENTS]

This solution takes into account different nursing documentation management methods, and therefore includes a wide range of optional forms and scoring schemes. Automatic checks and notifications, displaying information about allergies and vital data, quick availability and clear information arrangement - these all help prevent errors. An option to define proprietary code lists is a matter of fact. Gain extra time and safety for you and for your patients.
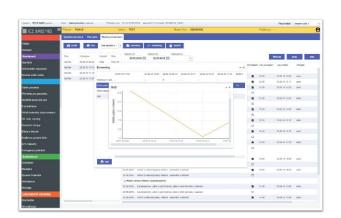

[FAST INTEGRATION WITH THE SURROUNDING ENVIRONMENT]

ICZ AMIS*HD® Nursing Documentation can be operated independently or as part of ICZ AMIS*HD®, the modern clinical information system. The system provides simple and fast integration for existing customers using the tried-and-tested AMIS*H solution.

[MODERN TECHNOLOGY]

The solution is built on state-of-the-art three-tiered architecture and features fast response when working with the application, high reliability and low demand on terminal station performance. At the same time, it offers sufficient performance for operation in large healthcare facilities such as regional and university hospitals. The terminal client is fully multiplatform and can be operated with any operating system.
